POS, kitchen printers, Wi-Fi and new restaurant openings.

During service

A till, kitchen printer or card terminal that stops during service is the problem we are usually called for. We work with the installed POS platform, including Oracle MICROS / Simphony where that is the system in use, and with the printers and screens around it.

Around the dining room

Guest Wi-Fi, staff Wi-Fi and the POS network need a deliberate design. Cameras, music and telephones are included when they are part of the site.

A new café or restaurant

We can join while drawings are still open: power and UPS for the rack and tills, containment, routes, equipment locations and the interface with the MEP drawings. After opening, the same site can move onto a support agreement.

What helps a proposal

The POS name, an approximate count of terminals and printers, whether guest Wi-Fi exists, and what is going wrong today. Unknown quantities are acceptable.
